

# Project/Topic Ideas for C769

This is not an exhaustive list. If you decide on one of these, be sure that you can clearly relate it to your Program Emphasis. In the Topic Approval Form, e.g., you could solve a problem that is Emphasis-related; you could include an Emphasis-related goal; or you could provide hard deliverables that are clearly related; or all of the previous. Remember, NO HOME-BASED SYSTEMS and AVOID USER TRAINING SYSTEMS.

- A system for real-time intrusion detection
- A wireless network for a commercial entity indicating what makes it more complex than a typical home system.
- Remediation/prevention of a hacking attack.
- Installation of a functional system (scheduling, networking, point-of-sale, financial, etc.).
- Implement a secure messaging system.
- Technology upgrade (network refresh, work station upgrades, BYOD systems, etc.)
- Wireless LAN upgrade
- Merging networks
- MFA Implementation
- Data center backups
